1. SIGNIFICANT ACCOUNTING POLICIES

SECURITY VALUATION

Each Fund's investments are valued at fair value each day that the Fund's listing exchange is open. U.S. GAAP defines fair value as the price a fund would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. The BlackRock Global Valuation Methodologies Committee (the "Global Valuation Committee") provides oversight of the valuation of investments for the Funds. The investments of each Fund are valued pursuant to policies and procedures developed by the Global Valuation Committee and approved by the Board of Trustees of the Trust (the "Board").

- Equity investments traded on a recognized securities exchange are valued at that day's last reported trade price or the official closing price, as applicable, on the exchange where the stock is primarily traded. Equity investments traded on a recognized exchange for which there were no sales on that day are valued at the last traded price.

- Fixed income investments are valued at the last available bid price received from independent pricing services. In determining the value of a fixed income investment, pricing services may use certain information with respect to transactions in such investments, quotations from dealers, pricing matrixes, market transactions in comparable investments, various relationships observed in the market between investments and calculated yield measures.

- Exchange-traded funds and closed-end funds traded on a recognized securities exchange are valued at that day's last reported trade price or the official closing price, as applicable, on the exchange where the fund is primarily traded. Funds traded on a recognized exchange for which there were no sales on that day are valued at the last traded price.

- Open-end U.S. mutual funds are valued at that day's published net asset value (NAV).

- Financial futures contracts are valued at that day's last reported settlement price on the exchange where the contract is traded.

In the event that application of these methods of valuation results in a price for an investment which is deemed not to be representative of the fair value of such investment or if a price is not available, the investment will be valued based upon other available factors deemed relevant by the Global Valuation Committee, in accordance with policies approved by the Board. These factors include but are not limited to (i) attributes specific to the investment; (ii) the principal market for the investment; (iii) the customary participants in the principal market for the investment; (iv) data assumptions by market participants for the investment, if reasonably available; (v) quoted prices for similar investments in active markets; and (vi) other factors, such as future cash flows, interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and/or other default rates. Valuations based on such factors are reported to the Board on a quarterly basis.

The Global Valuation Committee employs various methods for calibrating valuation approaches for investments where an active market does not exist, including regular due diligence of the Trust's pricing vendors, a regular review of key inputs and assumptions, transactional back-testing or disposition analysis to compare unrealized gains and losses to realized gains and losses, reviews of missing or stale prices and large movements in market values, and reviews of market related activity.

Fair value pricing could result in a difference between the prices used to calculate a Fund's net asset value and the prices used by the Fund's underlying index, which in turn could result in a difference between the Fund's performance and the performance of the Fund's underlying index.

iSHARES® TRUST

Various inputs are used in determining the fair value of financial instruments. Inputs may be based on independent market data ("observable inputs") or they may be internally developed ("unobservable inputs"). These inputs are categorized into a disclosure hierarchy consisting of three broad levels for financial reporting purposes. The level of a value determined for a financial instrument within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement in its entirety. The categorization of a value determined for a financial instrument within the hierarchy is based upon the pricing transparency of the instrument and does not necessarily correspond to the Funds' perceived risk of that instrument. The three levels of the fair value hierarchy are as follows:

- Level 1 — Unadjusted quoted prices in active markets for identical assets or liabilities;
- Level 2 — Inputs other than quoted prices included within Level 1 that are observable for the asset or liability either directly or indirectly, including quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not considered to be active, inputs other than quoted prices that are observable for the asset or liability (such as exchange rates, financing terms, interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs; and
- Level 3 — Unobservable inputs for the asset or liability, including the Funds' assumptions used in determining the fair value of investments.

Changes in valuation techniques may result in transfers in or out of an assigned level within the disclosure hierarchy. In accordance with the Trust's policy, transfers between different levels of the fair value hierarchy are deemed to have occurred as of the beginning of the reporting period.

The following table summarizes the value of each of the Funds' investments according to the fair value hierarchy as of December 31, 2012. The breakdown of each Fund's investments into major categories is disclosed in its respective schedule of investments.

RECENT ACCOUNTING STANDARD

In December 2011, the Financial Accounting Standards Board issued guidance to enhance current disclosure requirements on offsetting of certain assets and liabilities and enable financial statement users to compare financial statements prepared under U.S. GAAP and International Financial Reporting Standards (IFRS). The new disclosures are required for investments and derivative financial instruments subject to master netting agreements or similar agreements and require an entity to disclose both gross and net information about such investments and transactions eligible for offset in the statement of assets and liabilities. In addition, the standard requires disclosure of collateral received and posted in connection with master netting agreements or similar agreements. The guidance is effective for financial statements for fiscal years beginning after January 1, 2013, and interim periods within those fiscal years. Management is evaluating the impact of this guidance on the Funds' financial statements and disclosures.

2. TRANSACTIONS WITH AFFILIATES

Each Fund may invest its positive cash balances in certain money market funds managed by BlackRock Fund Advisors ("BFA"), the Funds' investment adviser, or an affiliate. BFA is a California corporation owned by BlackRock, Inc. ("BlackRock").

The PNC Financial Services Group, Inc. is the largest stockholder of BlackRock and is considered to be an affiliate of the Funds for 1940 Act purposes.

Certain Funds, in order to improve their portfolio liquidity and their ability to track their respective underlying index, may invest in shares of other iShares funds that invest in securities in each Fund's respective underlying index.

Investments in issuers considered to be affiliates of the Funds (excluding short-term investments) during the nine months ended December 31, 2012, for purposes of Section 2(a)(3) of the 1940 Act, were as follows:

3. LOANS OF PORTFOLIO SECURITIES

Each Fund may lend its investment securities to approved borrowers, such as brokers, dealers and other financial institutions. The borrower pledges and maintains with the Fund collateral consisting of cash, an irrevocable letter of credit issued by a bank, or securities issued or guaranteed by the U.S. government. The initial collateral received by each Fund is required to have a value of at least 102% of the current value of the loaned securities for securities traded on U.S. exchanges and a value of at least 105% for all other securities. The collateral is maintained thereafter, at a value equal to at least 100% of the current value of the securities on loan. The market value of the loaned securities is determined at the close of each business day of the Funds and any additional required collateral is delivered to the Funds on the next business day. The risks of securities lending include the risk that the borrower may not provide additional collateral when required or may not return the securities when due. To mitigate these risks, the Funds benefit from a borrower default indemnity provided by BlackRock. BlackRock's indemnity allows for full replacement of securities lent. Any securities lending cash collateral may be reinvested in certain short-term instruments either directly on behalf of a fund or through one or more joint accounts or money market funds, including those managed by BFA or its affiliates. Each Fund could suffer a loss if the value of an investment purchased with cash collateral falls below the value of the cash collateral received.

As of December 31, 2012, any securities on loan were collateralized by cash. The cash collateral received was invested in money market funds managed by BFA.

4. FINANCIAL FUTURES CONTRACTS

Each Fund may purchase or sell financial futures contracts in an effort to help such Fund track its underlying index. A futures contract is a standardized, exchange-traded agreement to buy and sell a financial instrument at a set price on a future date. Upon entering into a futures contract, the Fund is required to pledge to the executing broker which holds segregated from its own assets, an amount of cash, U.S. government securities or other high-quality debt and equity securities equal to the minimum initial margin requirements of the exchange on which the contract is traded. Losses may arise if the value of a futures contract decreases due to an unfavorable change in the market rates or values of the underlying instrument during the term of the contract or if the counterparty does not perform under the contract. The use of futures contracts also involves the risk of an imperfect correlation in the movements in the price of futures contracts and the assets underlying such contracts.
